- Cap Storage Tray
- Modular Design

Left: Shows the modular connection with dual pigtail station valves with tee and CGA fittings

Right: a 24-cylinder manifold, short design with dual pigtails

Manifolds, Traversing & Palletized (Retracto)

Spec Sheet

Linear – Traversing, Maximize the use of floor space while minimizing cylinder handling. Cylinders are stored and filled in the same location, and the manifolds are moved on a track to the cylinders to be filled. Include:

- Cap tray or hooks
- Pigtails in a variety of lengths and types, including safety line
- Heavy Duty steel construction & powder painted
- Individual station valves with burst disc
- Light indicator when it includes our Fill-Free Automation
- Small cylinder tray available (Shown below)

Palletized (Retracto) – Fixed or Traversing, Designs range from single-sided stationary fill heads to double-sided traversing fill heads. Our fill islands have a control center for either manual or automated filling. Along with your customized fill island, we can design and manufacture a matching cylinder prep-and-sort island. Include:

- Cap hooks
- Pigtails in a variety of lengths and types, including safety line
- Individual station valves with burst disc
- 15, 16, 18 or 21 cylinder designs are commonly sold
- Removable side panels for easy access
- 360° swivel and quick connect upgrade available
